Abstract (en)
[origin: EP0432397A2] To be able to disassemble again an undercut anchor which is anchored in a borehole with undercut, a disassembling device is proposed which engages on the sleeve of the undercut anchor with a claw. A threaded rod is screwed against the projecting threaded bolt of the undercut anchor, so that axial pressure is exerted on the threaded bolt, while at the same time a tensile force acts on the sleeve of the undercut anchor. <IMAGE>
