Abstract (en)
[origin: EP0432805A1] In lattice girders for space trusses having two boom profiles (1) extending at a distance and connected to one another via bracings, it is proposed to provide the boom profiles (1), in pairs, with radially extending openings (5) and to use, as bracings, bars (2) which extend alternately in the diagonals and are fixed with their bent ends engaging into an opening (5) and preferably so as to be detachable at that point.
