Abstract (en)
[origin: EP0432824A1] A rear seat (1) in a passenger car comprises folding back-cushions (25,26). Behind the back-cushions (25,26) is a frame (38) arranged to support the back-cushions (25,26) in the normal back inclination position, in order to constitute a safety-belt fixing point and in order to constitute load-shifting protection against any loads in the baggage space of the car which might slide. The back-cushions (25,26) are pivotably mounted on the frame (38) and the frame (38) is pivotably mounted on the body floor (7). The back-cushions (25,26) are thus pivotable from back inclination position into loading position either independently of the frame (38) or together with the frame (38). <IMAGE>
