Abstract (en)
[origin: EP0432993A2] A tyre building apparatus includes a former made of a plurality of segment units (3) arranged in a circumference, an inner shaft (5) extending through the former, an outer shaft (6) and a sleeve (100) slidably mounted on the inner shaft (5), the outer shaft (6) and the sleeve (100) carrying a right guide mechanism (7), a left guide mechanism (7), a right slider (8), and a left slider (8) respectively, a right link mechanism (9), and left link mechanism (9) provided between the right slider (8) and the right guide mechanism (7), a left link mechanism (9) provided between the left slider (8) and the left guide mechanism (7). Another embodiment includes a former made of a plurality of segment units (3) arranged having a centre segment (1), a right side segment (2), and a left side segment (2), and a right moving device for moving the right side segment (2) in axial and radial directions, a left moving device for moving the left side segment (2) in axial and radial directions, and a centre segment support device (12) for supporting the centre segment (1) with biasing radially inward. The former can be set into an axially expanded state, an axially contracted state, a radially expanded state and a radially contracted state. <IMAGE>
