Abstract (en)

[origin: EP0433182A1] The chin piece of the helmet consists of two mutually symmetrical movable shell parts (2, 3), linked, respectively, to the lateral right and left regions of the crown (shell) (1) of the helmet, for example by means of lateral slides. The two shell pieces (2, 3) can be moved between an advanced position, in which their front ends join up (at 4) in the longitudinal median plane of the helmet, and a retracted position, in which these two shell parts (2, 3) are moved back and are located in the lateral regions of the crown (shell) (1). In the advanced position, the two shell parts (2, 3) are joined by locking means (16). The wearer's face is entirely uncovered when the shell parts occupy their retracted position. <??>This helmet is intended more particularly for members of the police force and constabulary. <IMAGE>
