Abstract (en)
[origin: EP0433238A2] In order to prevent the clothes hangers on the clothes rail (15) slipping together during the transportation of clothes situated on clothes hangers (9), a hook is proposed which has recesses (6, 6') on arms (7, 7') situated between eyes (2, 2', 3, 3') with fixation and swivel means (4, 4', 5, 5'), in which recesses the hooks (8) of the clothes hangers (9) can be clamped. In this case, the two halves (1, 1') of the device are of identical shape, are advantageously made of plastic and can have a prestress. <IMAGE>
