Abstract (en)
[origin: WO9001603A2] A lock assembly and a casing for the opening of doors by means of keyed information, comprising a torque transmitting means (26, 27), a blocking means (22, 24), a releasing means (19, 20), a power supply for supplying the releasing means (19) and means (1) for the input of keyed information wherein said torque transmitting means (26, 27) is adapted to be connected to the torque shaft (28) of an existing lock mechanism. The casing has a set of through holes (206, 107) which are positioned in order to match the preexisting attachment holes of the existing lock (9), and wherein the inner handle (13) of the existing lock mechanism (9), can be used independently of the position of the blocking mechanism (22, 24) within the casing (12).
