Abstract (en)

[origin: EP0433572A1] The writing instrument with built-in stamp (23) has a propelling mechanism and a stamp carrier (22). The propelling mechanism serves to change the axial position of a writing point (11). When this is done, the twisting mechanism integrated into the propelling mechanism is actuated with the assistance of a cap (50) of the stamp carrier. A part of the propelling mechanism is moulded onto the stamp carrier in such a way that the writing point can be inserted into this part. Sufficient space is thus created in the axial direction of the writing instrument not to restrict the length of the writing points used. <IMAGE>
