Abstract (en)  
[origin: EP0433726A1] The invention relates to a sliding/folding door system for a cabinet, having a first door leaf (1) and a second door leaf (2) which are pivotable relative to one another, and having a carrier arrangement (5) which, in the state of the door leaves (1,2) oriented parallel to one another, can be pushed together with these into a push-in gap (23). To achieve a reliable guidance and movement of the door leaves (1,2) and to make it possible also to use the system for very large dimensions, according to the invention the first door leaf (1) is mounted on a guide rail (8) by means of a guide element (7) so as to be displaceable transversely to the front side of the cabinet, in the swung-open state of the door leaves (1,2) the guide element (7) can be transferred into a second guide rail (9) arranged parallel to the outer wall (6), and attached to the carrier arrangement is a bolt device (10) which prevents unintentional movements and pivotings of the door leaves (1,2) (Figure 1). <IMAGE>
