Abstract (en)

[origin: EP0433737A1] A bed, especially a bed for patients and/or a bed for nursing, consists of a bed frame (1) in which a preferably adjustable insert or frame for lying on is arranged, and a lifting carriage (21) which supports the bed frame (1) and which has a lifting device for raising and lowering the bed frame (1), with several footrests (5), preferably four. The bed frame (1) has downwardly directed supporting columns (3). Provided in each case at the foot of the supporting columns (3) is a castor (6). In order to improve the outward appearance of a bed of this type, the support columns (3) and the castors (6) are arranged inside the footrests (5). In the lowered state, the castors (6) project downwards and out from the footrests (5) (Fig. 1). <IMAGE>
