Abstract (en)
[origin: EP0433905A2] A device is described for dispensing flowable media, which device consists of a container with a tube of elastically deformable materials and a valve device in the tube part, the device having a stationary contact-pressure part and a pivotable lever possessing a contact-pressure surface. The pivotable lever serves to compress the tube section arranged between the contact-pressure part and the contact-pressure surface, opening the valve device and dispensing the medium contained in the tube, the tube being connected to a pivotable section of the lever.
