Abstract (en)  
[origin: EP0434076A2] With the invention, an insert for a shoe made of hard resilient laminate of preferably uniform thickness is made available, which has transverse profiling running transversely to the longitudinal direction of the shoe. The insert extends over the forefoot, the rear of the foot or over the entire foot sole extent or even only over parts of the foot sole and has one or more of the following features (a) to (g): (a) cutouts are provided on the outside and/or the inside of the insert; (b) the insert has in the region of the heel radial cutouts and/or radial profiling; (c) the insert is skeletonised, being cut out in predetermined regions; (d) the insert consists of mutually separated elements which are rigidly interconnected with a torsion rod or otherwise; (e) the transverse profiling runs essentially or approximately perpendicular to the line of the points of application of force or comprises a number of regions of different inclination to the longitudinal axis of the insert; (f) slots are provided in the region of the sole; (g) one or more damping elements are built in in the region of the heel part of the insert and/or of the forefoot part, or one or more cutouts are provided to receive damping elements. s
