Abstract (en)  
[origin: EP0434555A1] Essentially metal viaduct for a railway track for a vehicle rolling on two rails. According to the invention, the deck held above the ground, for example by piers, is noteworthy in that the rails (14) form an integral part of the said deck by being, for example, integrated with portions of perforated metallic structure comprising tie-rods (20), sleepers (26) and elements forming a crosspiece (sleeper) (22) defining a triangulated network. <IMAGE>
