Abstract (en)

[origin: WO9003191A1] In the process disclosed, the casting materials are treated with an aqueous solution of a disinfectant which contains, in addition, 0.1 to 15 wt.% of a soluble alcohol. This ensures high dimensional stability and good surface quality of the mould, even in the case of critical moulding materials such as alginates.

Abstract (fr)

On traite la matière de moulage avec une solution aqueuse de produit désinfectant contenant en outre entre 0,1 et 15 % en poids d'un alcool soluble. On obtient ainsi des moulages extrêmement fidèles, tant pour les dimensions que pour la qualité de la surface, même à partir de matières de moulage difficiles, comme les alginates.
