Abstract (en)

[origin: EP0434962A1] In hinged lid packets having a packet part (10) and a lid (11) articulated thereon, especially in the design having round edges, the problem exists of retaining the lid (11) with precision in the closed position. In order to achieve this, a closing force is exerted on the lid, which is achieved by frictional closure or hooking of a collar (23) in the lid (11). The hooking is effected in that webs (42) defining a recess (29) in the collar (23) are pushed into lateral apertures (43) in an inner tab (39) of the lid and thus enter a jammed position. <IMAGE>
