Abstract (en)

[origin: EP0435115A2] What is described is a holder which is intended especially for wings of windows, doors and window blinds and which comprises a push rod mounted on a horizontal end face of the wing or blind and having an actuating end and a locking element which can be coupled to a holding member to form a releasable locking connection for fixing the wing or blind in the open or closed position. The push rod is designed in the form of a flat strip, and also the locking element provided in the region of the push-rod end facing away from the actuating end consists of at least one flat-plate part having a locking recess intended for coupling to the holding member located on the frame or wall. <IMAGE>
