Abstract (en)

A silver halide color photographic material comprising a support having thereon at least one red-sensitive silver halide emulsion layer containing a cyan coupler, at least one green-sensitive silver halide emulsion layer containing a magenta coupler and at least one blue-sensitive silver halide emulsion layer containing a yellow coupler, wherein said photographic material contains at least one compound represented by the following general formula (I) and at least one yellow colored cyan coupler: <CHEM> wherein A represents a group which is cleaved from (L1)v-B-(L2)w-DI by a reaction of the compound of formula (I) with an oxidation product of a developing agent; L1 represents a bonding group which is cleaved from B after the cleavage of the bond between L1 and A; B represents a group which reacts with an oxidation product of a developing agent to release (L2)w-DI; L2 is a group which is cleaved from DI after the cleavage of the bond between B and L2; DI represents a development inhibitor; v and w each represents an integer of 0 to 2; and when v or w is 2, the two L1 groups or the two L2 groups may be the same or different groups.
