Abstract (en)  
[origin: EP0435608A2] An image forming process comprising cleaning toner remaining on an amorphous silicon photoreceptor, forming an electrostatic latent image on the amorphous silicon photoreceptor, developing the latent image to form a toner image with the developer, and transferring the toner image to a transfer member; wherein the developer comprises a toner which comprises colored particles containing at least a resin and a colorant and composite particles, the composite particles comprising inorganic particles having an average particle-size of 0.01 to 1  $\mu$ m each stuck onto the surfaces of resin particles having an average particle-size of 0.1 to 7  $\mu$ m and the resin of the resin particle having a yield point from 10 to 500 kg/cm<sup>2</sup> at 20 DEG C. <IMAGE>
