Abstract (en)

[origin: EP0435723A1] The subject of the invention is a device for receiving sheets obtained by cutting from a paper web coming from a reel of small diameter, of the type comprising, at the exit of the paper reel (1), a first chute (3) on which the end of the web is deposited, at the exit of the paper cutter (9, 10), a first guide piece (13) on which the cut sheet is deposited, and a receptacle (12) for the sheets following on from this guide piece (13). According to the invention, this device also comprises a second chute (6) located above the first (3) and substantially parallel to the latter, and a second guide piece (11) located above and substantially parallel to the first guide piece (13). <IMAGE>
