Abstract (en)
[origin: WO9003477A1] A kit of components from which a prefabricated building can be made are arranged such that the kit forms a transportation unit (1) that has the size and shape of a substantially standard container. The structure of this container consists substantially only of components of the prefabricated building and the structure comprises a cuboidal frame having edges which are formed from, and can be separated into, elongate beams (2, 3, 4) for use in the building. Generally all twelve edges of the frame are formed from and can be separated into twelve elongate beams and these beams may be secured to each other at the corners of the frame by corner pieces (5).
