Abstract (en)  
Since game media used in a slot machine according to the present invention can be collectively supplied for a plurality of games when games are played continuously, it is not necessary for the game medium to be supplied at every game. The winning dispensation of the game media at the time of the play of a plurality of games is not conducted at each winning of the game. Numerical values representing the number of the game media to be dispensed at each of the winning games are accumulated at each of the winning of the game a data representing the dispensation numerical data. The winning dispensation is conducted with the game media on condition that the dispensation numerical data is present at the request made with determining the number of the media to be dispensed by a player within a range of the data or the player request when the player completes the play with the slot machine.
