Abstract (en)
[origin: EP0436064A1] The invention relates to a lamp holder 1 for holding a glow lamp 2, especially a glass base lamp, or a plastic base lamp having two contact elements 8' and 9', which are supported inside the holder, on the one hand are connected inside the holder to contact wires of the glass base lamp and, on the other hand, project beyond the holder region. In this case, the two contact elements 8', 9' in each case consist of an electrically conductive plastic material, known per se. The holder 1 additionally has an outer sleeve 10', surrounding the contact elements 8', 9', and an inner separating region 11', which is arranged inside the holder 1 and insulates the contact elements 8', 9' from one another.
