Abstract (en)  
[origin: EP0436163A2] 1. Electrical burglary protection device with random switching. 2.1 Conventional burglar protection devices with random switching are complicated, because of the loads which are connected to the random switching via separate lines, and can be used only at considerable cost. 2.2 According to the invention, the random switching (1; 20) of the electrical burglar protection device is constructed such that it can be installed either inside an electrical domestic distribution device (3) or in conventional flush-mounted sockets. 2.3 Also for electrical burglary protection devices which can be installed subsequently. 3. <IMAGE>
