Abstract (en)

[origin: EP0436776A2] Film resistors with structured contact surfaces are described. The insulating strips for structuring are laid such that in each case one constriction is constructed between two contact surfaces associated with a connection track, via which constriction the contact surfaces are electrically connected to one another and to the connection track. In addition, when making contact with the connecting wires, in each case both contact surfaces must be connected to the connecting wire.
