Abstract (en)

[origin: EP0437988A2] Detergent compound characterised in that it comprises a support consisting of an at least partially hydrated polyphosphate, the said polyphosphate incorporating or supporting at least one substance intended to be distributed uniformly on an item of washing and a product chosen from the group comprising the siliconates, the derivatives of siliconates and the silicone resins. The invention applies particularly to the case where the abovementioned substance is chosen from the group of optically active agents such as the optical whitening agents.
