Abstract (en)

[origin: US5099979A] The invention relates to a parting device for substantially parallelipipedic bodies of deep-frozen foodstuffs or feedstuffs. For the purpose of supplying the body (4) to be parted centred to parting elements, stop rails (2, 3) which can be urged towards the body (4) to be guided are disposed on both sides thereof. The stop rails (2, 3) are mounted via sliding pins (9, 11) in bearing blocks (13, 15) and so interconnected via a transmission comprising lever arms (26, 27), control shafts (20, 21) and links (28, 29) that they can be uniformly expanded apart against the force of springs, so that bodies of any width can be supplied centred to the parting elements.
