Abstract (en)

[origin: EP0438129A2] A novel silver halide color photographic material is provided comprising on a support at least one silver halide emulsion layer, wherein the material contains a compound represented by general formula (I):  $A-L1-L2-INH-(CN2)_n-Q$  (I) wherein A represents a coupler residue excepting 1H-pyrazolo[1,5-b]-1,2,4-triazole and 1H-pyrazolo[5,1-c]-1,2,4-triazole; L1 represents <CHEM> in which W represents an oxygen atom, a sulfur atom or a tertiary amino group, and R11 and R12 each independently represents a hydrogen atom or a substituent; L2 represents a group which undergoes electron migration along a conjugated system to release  $INH-(CH2)_n-Q$ ; INH represents a development inhibitor residue bonded to L2 via a hetero atom; n represents an integer of 0 to 3; and Q represents a group having a molecular weight of 80 to 250.
