Abstract (en)
[origin: WO9004121A1] A continuously variable transmission includes a toroidal race rolling traction unit (5) which is connectable in distinct regimes to an output rotary member (18) by way of an epicyclic gear stage (19-21). Various means are provided for interrupting or inhibiting the action of the epicyclic gear stage so as to provide at least one fixed transmission ratio of low loss within the range of continuously variable transmission ratios that the rolling race unit can provide.
