Abstract (en)
[origin: EP0438946A1] The present invention concerns a security deposit device comprising an access box connected to a safe. This device essentially comprises a box (1) integral with the upper wall of a safe and allowing the insertion of valuables subsequently routed into the safe, the box (1) being fixed to the upper wall of the safe by at least two feet (P) respectively anchored by one end (7) in the material of the two opposite side walls (8) of the box (1) and traversing the upper wall of the safe with their opposite ends (9) and retained on this wall by means of keys passing through orifices (12) produced in the end (9) of each foot (P). This device allows, in particular, the deposit and safe keeping of money without the intervention of any person other than the one possessing that money. <IMAGE>
