Abstract (en)

[origin: EP0439397A1] Water-level control in a vessel of a household appliance, characterised in that it comprises a dispenser (40) for clean water comprising two parallel exit channels (41, 42) each having a capacity for evacuation of all of the water received by this dispenser, namely a priority exit channel (41) operating in a priority manner by passage through a control chamber (38) which opens or closes this priority channel (41) according to an absence or a presence of air trapped and compressed by a rise of water in this control chamber (38), and a substitute exit channel (42) working as a replacement for this priority exit channel on progressive closure of the latter by this control chamber (38). <IMAGE>
