Abstract (en)
[origin: WO9011803A1] A therapeutic and sports device with a frame consisting of four mutually hinged components, where the lower part of the frame is carried so as to be movable on a stand via a joint between its front and rear end, and of two spaced parallel cross-members between which a crankshaft (46) rotating with the drive wheel (48) is carried on one side on a web of the crankshaft and on the other on the stand (28) at or near the point at which the angles between the two extreme positions of the lower part of the frame (14) and between the two dead centres of the connecting rod are the same, i.e. angle alpha = angle beta .
