Abstract (en)

[origin: WO9102929A1] Air ducts and air-conditioning ducts for ventilation systems have a surface designed to have a bactericidal and fungicidal action. This design results in the air flowing through the air duct being subjected to a chemical treatment. In order to improve the chemical action, the invention proposes that the internal surface of the duct has strongly alkaline and strongly acidic sections which alternate in separate zones along the duct in the direction of flow of the air.
