Abstract (en)
[origin: EP0439736A2] The ceiling air outlet has an air supply connection piece and outlet-side guide vanes for creating twist. Between the guide vanes, there are air passage gaps for direct passage of air. Arranged in front of the guide vanes in the direction of flow is a fan wheel with deflector blades. By means of the deflector blades, the air passage gaps can be completely or partially covered. As a result, the jet direction is variable on the one hand and the direct passage of air can be varied on the other hand. <IMAGE>
