Abstract (en)
[origin: EP0439795A1] The subject of the invention is a shower partition having at least one displaceably guided door leaf which is offset relative to a fixed or displaceable wall or door element and also overlaps the latter in the closed position. The displaceable door leaf (2) is guided along a profiled rail (4) via rollers or slides (5) which are arranged on spindles (7, 8). The spindle (7) situated in the overlap area projects beyond the side of the door leaf (2) remote from the roller (5), and the door leaf (2) is displaceably mounted on this spindle (7). After the release of a latch, the door leaf (2) can be swung away from the further wall or door element, so that the overlap region is conveniently accessible for cleaning purposes. <IMAGE>
