Abstract (en)
[origin: EP0439988A2] The installation of installed options (17, 19, 21, 23) is monitored automatically by a computer at start-up. The presence of each option is recorded in battery backed-up memory (9). At each start-up the current options are compared with those in memory, and those options which were added but are not currently found to be installed are shown in an optional message on display 1 with emphasis. The computer is not reconfigured by the operator for new options. <IMAGE>
