Abstract (en)

Disclosed is a light-sensitive silver halide photographic material having been provided at least one silver halide emulsion layer on respective surfaces of a transparent support, characterized in that when an exposure dose at a position of one surface is an exposure dose giving a density of a fog density + 1.60 after exposing from a high sensitivity surface of the light-sensitive material and developing, a density at a position of the other surface corresponding to the position is a fog density + 0.20 or less.
