Abstract (en)
[origin: EP0440889A1] The invention relates to a waste receptacle having a dome-shaped top and a throw-in aperture (27) arranged in the dome and closed by a lid, the outer surface of the lid thereof being matched to the contour of the dome; in order to achieve a particularly ideal embodiment for practical purposes, it is proposed that the edge of the throw-in aperture (27) should lie in a secant plane of the dome (28) and the lid surface should pivot parallel to the contour of the dome out of its position in which it projects beyond the secant plane and downwards behind the dome wall.
