Abstract (en)

[origin: EP0441161A2] In order to design a lateral drawer frame made of plastic or metallic profiles in such a way that various adjustment possibilities are achieved for the purpose of aligning a front panel, it is proposed to use a connecting bracket (4) with a bearing part (6), which can be fixed to a front panel, and a holding part (7) which can be fixed in a receiving chamber (3) of a lateral frame (2) at various height levels of the lateral frame (2), the bearing part (6) being displaceable relative to the holding part (7) parallel to the plane of the front panel and perpendicular to the lateral frames (2) and being detachably fastened to the holding part (7) in any position of displacement.
