Abstract (en)
[origin: EP0441162A2] The drawer (1) according to the invention is fitted with a rear wall (3) made of a plastic or metallic profile and the lateral frames (2) have a screwing-in channel running in the longitudinal direction and, like the rear wall (3), are bevelled in the connection region with the rear wall (3). The rear wall (3) has a limb which extends downwards beyond the screwing-in channel of the lateral frames and through which attachment screws pass which are screwed into the screwing-in channels. The rear wall and the lateral frames are provided in the lower edge region with receiving grooves for a bottom (4). This design allows an improved connection between the lateral frames (2) and the rear wall (3) and improved receiving of the bottom (4).
