Abstract (en)
[origin: EP0441223A2] In a riveting tool having two articulated levers for carrying out the actual riveting operation and a threaded arbor, able to be set in rotation, for screwing on the rivet nut and for screwing out after the riveting operation, provision is made, at the rear end of the tool housing (15, 18) located opposite the threaded arbor (1) for a rotary device in the form of a rotary head (22) which is connected, so as to be fixed in terms of rotation, to a feed rod (16) connected to the threaded arbor (1) projecting at the front end of the tool. <IMAGE>
