Abstract (en)
[origin: EP0441667A2] The invention relates to a device for removing make-up, consisting of absorbent material. The absorbent material is distributed in two layers (2, 3), preferably of the same thickness, disposed on both sides of a thin stop (barrier) layer (1), which is water-repellent and/or leaktight with regard to the make-up removing product, the said layers of absorbent material and/or the said stop (barrier) layer consisting of or containing thermofusible substances and being integrated mutually by the supply of heat and under pressure.
