Abstract (en)

The container for glass phials, flacons and the like, comprises a box-type case (1) suited to contain a plurality of phials (2) orderly arranged side by side. Inside the case (1) are devised to be inserted and restrained a plurality of separating elements (3) which define corresponding seatings (4) for housing the phials (2) and which are provided at one end with flaps (6) which are given a transverse folding and which are suited to engage with the neck (2a) of the phials (2), in order to hold the phials (2) axially. <IMAGE>
