Abstract (en)

[origin: EP0441990A1] A method for the chaotic intermediate storage of reels (6) and a storing and clearing-out device for carrying out this method are characterised in that a plurality of load-receiving means (19, 20, 77, 78, 79, 80, 81) raisable and lowerable independently of one another are provided on a crane device, and by means of which reels (6) can be removed in succession from the entry point and/or received in succession from the storage point and transported jointly to the exit point. The throughput capacity is increased substantially thereby in comparison with known methods of this kind. <IMAGE>
