Abstract (en)

The invention concerns a method and a machine for packaging a group of six bottles (B) by means of two intersecting wrappings (1), (5) of plastic material, allowing to obtain a portable packing. The first wrapping (1) is applied on the vertical plane and is then gathered up at the top of the packing, so as to form a comfortable handle (6) allowing to grip the same; said vertical wrapping is formed in its upper part of a length of strong polyethylene strap, and in its lower part of a length of polypropylene or polyvinylchloride adhesive tape. The second wrapping (5) is applied on the horizontal plane and consists of a film of plastic stretching material, apt to tighten the first wrapping and block it into position. The invention also concerns the portable packing obtained with said method. <IMAGE>
