Abstract (en)  
[origin: EP0442397A2] A refrigerated vending cabinet is described which is fitted with an upper merchandise space (1), which is designed as a shelf structure, and with a lower merchandise space (2) which projects in front of the shelf structure. To the right and left of the merchandise spaces (1, 2) there is in each case a side wall (6) arranged perpendicular to the front side facing the customer. According to the invention, the two side walls (6) are not made from one workpiece, but from at least two modules. One side wall (6) has a main module (7) and at least one auxiliary module (8, 9) which is connected to the main module (7). The main module (7) bounds the shelf structure (1) laterally and the auxiliary module(s) (8,9) bounds or bound the front region of the merchandise space.
