Abstract (en)

[origin: EP0442805A1] The invention relates to a watertight roofing, especially for an industrial building, comprising a supporting element (2) adapted in order to be secured to a frame element (1) of the building, a layer of insulating material (3) disposed on the supporting element and a leak-tight covering (10) covering the layer of insulating material (3), connection means (4-9) being provided in order to keep these three constituents together, characterised in that a same first member (4) is used on the one hand in order to secure the supporting element (2) to the frame element (1), and on the other hand in order to form part of the said connection means and in that a second member is connected to the first member and to the watertight covering. In a first embodiment, the said first member is a screw (4) screwed into the frame element (1) and the said connection means comprise a hollow cylindrical intermediate part (6) whose bottom (20) is secured to the supporting element (2) by means of the said screw (4).
