Abstract (en)
[origin: WO9103193A1] The seat top consists of a number of ribs (2, 3, 4, 5, 6) vertically projecting from its base portion (1), and running parallel to one another and transversely to the direction of sitting. The frontmost ribs (2, 3) are inclined towards the front side, while the remaining ribs (4, 5, 6) are inclined towards the rear side. Ribs (2 and 3) are provided, at the side on their upper free ends with projections (7 and 8), which extend roughly parallel to the base portion (1) towards the rear side, whereas the ribs (4, 5, 6), which are inclined towards the rear side, are provided at the side on their upper free ends with projections (9, 10, 11), which also extend roughly parallel to the base plate (1), but towards the front side, so that the projections (7, 8, 9, 10, 11) partly cover the space (12) between the ribs, and form, together with the upper free ends of the ribs (2, 3, 4, 5, 6), a seating surface (13).
