Abstract (en)

[origin: WO9103283A1] In a racquet, especially a tennis racquet, with a handle (8) and a stretcher frame secured via a throat region (2) for stringing, in which the cross-section of the frame has at least a largest dimension transversely to the stringing, the cross-section (a, b, c) of the frame (1) or of the stretcher frame in the throat region (2) and in the region of the racquet head (3) opposite the grip end (8) is greater than in the region of the stretcher frame lying in between, where the cross-section (c) in the region of the racquet head (3) opposite the grip end is greater than that (b) in the throat region.
