Abstract (en)
[origin: EP0443354A1] The invention relates to a centrifugal pump in which arranged downstream of an impeller (7) is a flow chamber (11) starting from which there is a connection with one or more discharge stubs (2, 3). Inside the flow chamber is a number of elements (14, 15) corresponding to the number of discharge stubs (2, 3), with the aid of which elements it is ensured that the flow is guided helically inside the flow chamber (11).
