Abstract (en)

[origin: EP0443390A1] In the air texturing of multifilament chemical yarns, cold-air jets are blown onto the yarn transversely to the yarn axis. The yarn can be a fully stretched chemical yarn. The yarn is fed into the texturing zone by a heated galette 5. The yarn-tension conditions prevailing in the texturing zone guarantee the best possible shrink-out of the yarn. <IMAGE>
